NEUROPUBLIC (www.neuropublic.gr), is an innovative Greek SME specialized in the development of integrated information systems and high-demand applications built on Cloud computing architecture. Our products and services are being successfully used by more than 800.000 end-users in agriculture, local government and healthcare. NEUROPUBLIC has been for many years one of the financially healthiest and most robust informatics companies in Greece.

TITLE (advertisement ID : JAVA BACK END DEVELOPER_aueb 2021)

NEUROPUBLIC seeks to recruit a skilled a java backend developer to join our Earth Observation team, based at our head office in Piraeus, Attica, Greece. The role would suit a candidate with minimum 2-3 years' experience focusing on the implementation of REST & SOAP web services in our web applications. You will be working with a fast paced multi-disciplinary EO team contributing to national and European EO projects within the agriculture domain.

Responsibilities

- Develop and support internal and external web-based applications and data reporting systems
- Build reusable code and libraries for future use
- Develop new user facing features
- Perform data searches and retrievals
- Develop applications and geolocation tools
- Backend validation of input data and loading into Database
- Collaborate with other team members and stakeholders

Requirements

- A University degree in Informatics, Computer Science or related field
- Excellent programming skills in Java 7 and Java 8
- Excellent knowledge of SQL
- Working Experience with J2EE application servers
- Knowledge to build REST & SOAP web services in Java
- Working experience with ORMs and in particular JPA and Hibernate
- Excellent understanding of the web development process (information gathering, planning, design, development)
- Strong familiarity with PostgreSQL and Oracle Databases
- Versions control systems, like Git
- Excellent Greek and English communication skills, both written and spoken
- Ability to multitask, prioritize and manage time effectively
- Team player and communicate effectively
- Motivated to learn new skills and apply new knowledge in practice

Additional Skills:

- Programming knowledge in Python and bash
- Programming knowledge in Javascript, TypeScript and AngularJS
- Experience with GeoServer or another geospatial server
- Experience of using GIS APIs and SDK to build and develop applications
- Experience with GIS software (QGIS, OpenJump, SAGA GIS, Whitebox GAT, ArcGIS etc.)

Benefits:

- Competitive salary commensurate with the qualifications.
- Work in a friendly, diverse, dynamic and extroverted environment.
- Opportunity of further training and professional development within the company.

This job position offers a competitive salary commensurate with the qualifications and the opportunity to work in a friendly, diverse and dynamic environment that promotes further training and professional development. You will have the opportunity to work on innovative products that aim to transform agriculture in Greece and beyond. Please e-mail your CV and introductory letter at hr@neuropublic.gr and include the word (**Ref: JAVA-BACK-END-DEV_aueb 2021**) in the e-mail subject.
