

JOB POST: MOBILE SOFTWARE ENGINEER, IOS

We're hiring!

MOBILE SOFTWARE ENGINEER, IOS

We are looking for a Mobile Software Engineer, with experience in creating native iOS applications, to work on Warply's SDK. If you are interested in creating new features and finding new ways to make the existing SDK ore effective, then this is the job for you.

Role:

- Maintain the iOS and Android Warply SDK database. Efficiency - stability updates
- Co-operate closely with the product team in order to plan and create many new, exciting features in the Warply SDK
- Co-operate closely with the back-end developers in order to design the service and optimize device-to-server communication
- Provide technical guidance to other programmers in mobile apps development
- Document Warply's SDK APIs and the integration process of our clients' apps

Requirements:

- Experience in object-oriented programming
- Deep knowledge of Objective C
- Basic knowledge of Java
- 2 years minimum professional experience of developing complex applications for iOS and at least one application on Apps Store
- Experience in code-writing for Rest API services consumption, and data storing in the device

- Experience in designing clean, sustainable, backwards compatible APIs
- Use of a version control system, ideally Git

Desired Skills:

- Experience in Android Development
- Basic knowledge of Python / HTML / CSS / JavaScript
- Experience in Project Management
- Knowledge of UX and Mobile User Interface Patterns

We offer:

- Experience of an already big, existing codebase, with many users and lots of development opportunities
- Creative and fast-paced working environment with offices in downtown Athens
- Competitive salary
